Summary

Period : 8th to 9th (Thursday to Friday) November 2018.

Venue : Matsumoto Chuo Community Center and Chuo Gymnasium (M Wing)

Participants : approximately 1,700

Thursday, November 8, 2018

13:20~14:00 【Hall】

Opening Ceremony

Akira Sugeno

Executive Committee Chairman, (Mayor of Matsumoto city, and Chairman of Matsumoto Regional Health Industry Promotion Council)

Kunihiro Hamada (President of Shinshu University)

Vice Chairman, Matsumoto Regional Health Industry Promotion Council

Masaaki Uchida (guest)

Department Manager, Nagano Prefecture Industrial Policy Direction and Industrial Labor Department

Masakazu Aihara (guest)

Section Sub-Manager, Ministry of Health, Labor and Welfare Department of Health Section

Greeting from conductor

Greeting from guest, Masakazu Aihara

14:00~14:20 【Hall】

Introduction of Denmark by the Royal Danish Embassy

Mr. Kensuke Nakajima

Investment Manager, Royal Danish Embassy Tokyo

14:20~15:20 【Hall】

Keynote Address 1 "Bringing Happiness to Life with Playful Technology"

Professor Henrik Hautop Lund

Center for Playware, Technical University of Denmark

Summary of conference

- By using self-developed Moto tiles to train 60 seniors, the mean age of 83 for 4 hours per week (13 minutes per day, twice per week) and the results of seniors progressed for 148% for balancing, 22% for leg muscle strength, and evidenced for rapid improvement for short training time.
- By improving ability of Moto tiles of seniors, the cost of fracture by falling risk will be decreased, then 2,200 euro (about 280,00yen) will be also decreased, which has good effect to the society.
- By playing 4 types of games (each 2 minutes) are able to measure both physical and cognitive skills. Then the scores are analyzed with the standards, and able to find the program in the early stage. Therefore the individual auto-programmed trainings are available.
- The main purpose for design is "play." The most important point is self-motivation for playing the games to find the happiness and enjoyment. I would like bring the happiness to many people. This purpose is the same to the Matsumoto city's agenda and theme.

15:40~16:00 【Hall】

Introduction of England by the British Embassy Tokyo

Mr. Griff Jones, First Secretary for Science and Innovation, British Embassy Tokyo

16:00~17:00 【Hall】

Keynote Address 2 “Healthy Lifestyles– how can we help change attitudes and behaviour? Some examples from England”

Professor Gina Radford, Deputy Chief Medical Officer for England

Summary of conference

- Everyone wants to live long. Not only having long life but with healthy living can sustain the economy. (People can work in long term even with aging society.)
- When you want people’s behavior and the way of living to change, you need to provide the appropriate environment to make good decision.

【Three examples in Britain】

- Salt-reduction: the government and the private sectors cooperated to reduce the salt-consumption to their potential goal. The content of food in salt gradually reduced without consumers knowing. Finally, 11% of salt reduced in whole.
- Non-smoking: the British government established the environment for non-smoking policy by making laws from 2003.
- Obesity: 28% of British children are over-weight. The government taxed for high sugar contained beverages. Then the budget from this tax was brought to subsidy for healthy school lunch. We need all the government, regions and individuals involved for obesity education to the regulation.
- My message is “to be patient and continue.”

17:10~18:00 【Hall】

Manufacturers and Talks

Support for People, Cities, and Generations: A society where robots are 'the norm'

Mr. Yoichi Takamoto, Chairman and CEO, tmsuk Co., Ltd.

tmsuk introduced multi-tasked robots, which developed with many clients. In these robots, tmsuk demonstrated RODEM for use, developmental purpose and its process.

14:00~15:30 【3-2 Conference Room】 100 participants

Health Care Services Division, Matsumoto City Office

Gut Bacteria in Health and Disease

Dr. Shigeru Kamiya, Department Chair, Faculty of Health Sciences, Kyorin University

Lectured the history of cells and infections, differences in viruses, bacteria, and cells, dialogue on the role of intestinal flora, analysis method, relation between intestinal flora and exercise/obesity and disease, etc.

14:30~15:30,16:50~17:50 【Recreation Room】 53 attended in 2 days in cumulative total.

※Two sessions took place 11:30-12:30 and 13:30-14:30 on Friday 9th November.

Matsumoto City Health Promotion Federation

Let's make ribbon wreaths and tiny crafts! : Animate your brain and rejuvenate your spirit by using your fingertips

The provided corner was ribbon wreath and thumb-work crafts. The visitors were able to make one of each in an hour. Moreover, the corner provides the walking point and stride checking.

15:30~17:00 【4-3 Conference Room】 36 participants

Healthcom-lab Co., Ltd.

Shinshu University Venture

Dementia Prevention and Stimulation of the Local Economy

Mr. Keisuke Kaneko, CEO, Healthcom-lab Co., Ltd.

With explaining the recent status of dementia, studies at Shinshu University and its development, the demonstration of experiment, and practical verification subsidy project in Matsumoto Community Health Industry Promotion Council. the conduction of cognitive function check and dementia prevention campaign were done by all participants

15:45~16:45 【3-1 Conference Room】 43 participants

Matsumoto Dental Association

Good Teeth for Proper Chewing Make for a Sound Body

Dr. Takashi Sugiyama, President, Matsumoto Dental Association

The speaker lectured the causes and characteristics of tooth decay and periorbital disease. These are possible causes of systematic disease. The speaker also mentioned about the importance of oral care and life-long contact with the dentists.

How to improve gut health in light of inadequate nutrition from gut activity

Ms. Yoko Kamiya, Representative Director, Gut Environment Development Association

The speaker lectured about the important roles of intestine, the necessities of how to keep the good condition of intestine, and the points of everyday practices.

13:40~15:40 【Hall】

Panel Discussion

“Findings and studies that will change the future”

Moderator

Mr. Hiroshi Komiyama

Chairman, Mitsubishi Research Institute

Panelists

Mr. Yoshihide Esaki

Deputy Director-General, Commerce and Service Industry Policy Group, Ministry of Economy, Trade and Industry; Deputy Director-General, Health Policy Bureau, Ministry of Health, Labour and Welfare; Assistant Director, Health and Medical Strategy, Cabinet Office

Prof. Atsushi Makino

Tokyo University Graduate School of Education

Ms. Chika Sekine

Visiting Professor, Doshisha University Graduate School of Policy and Management
Chairperson and Senior Fellow, Udit Inc.

Mr. Hiroyuki Tsutsumi

President, Philips Japan

Summary of Panel Discussion

Way of living in "100-year-life."

- Discussing about aged society, "one workforce looks after one senior in 2060," is highlighted topic. However the aged society is the good society since all seniors are healthy. In this sense, it is the good society. The main problem is that the society changes without the policies and subjective view of the people.
- The current occurring welfare issues are from the policy of idealistic population structure of high economic growth period. The government should standardize the real age structure to consider and adjust the definition of senior and workforce age, meanwhile the old policy defined the senior was the age of 65, and the workforce was 15 to 64.
- In biologically, human being's life is 120 years. So second Kanreki (age of 60) is the matured way of Dai-Kanreki.
- Not only the "the first cycle generation" who are raising children, are supporting the "the second cycle." Also "the second cycle generation" who can spend their whole time into themselves and the society can support the society and the new structure makes the society with better atmosphere of raising children, and also secure living for children. That would be great aging society.

"Social health and self-assertiveness"

- The health of human belongs of the health of the society. Therefore, the human relation makes the people in the society to be meaningful of their lives. When the person gets meaningful life, she or he will care more about the health. The isolated individual has no health needs. The needs are born with relations.
- The importance of health is aware by everyone but the laziness is more preferred. So it is very difficult to practice. The enjoyment is demanded for structuring for health to win over the laziness.
- "Enjoyment" is the feeling on own change with the society. This makes people to be more motivated. The foundation of this is self-affirmation, such as being thanked, and being as themselves.
- To be independent, we need to make the environment which makes children with high self-affirmative. The self-affirmative environment is made by being patient and endurance.

"Universal Design"

- Aging makes people vulnerable with sickness. The aging society is the era of living

with disability and illness. Japan needs to be restructured with universal design for everyone with or without disability.

- The innovation makes the diversity of the society, which makes the change in it.
- When the lives change, even the seniors start using ICT to support people. Not only being supported, but also playing role of supporting others to become active by own.

“Common ICT platform”

- When we think about health with industry, there are many elements considered. “preventing” sickness for sustaining health, “diagnosing and curing” sickness, and “hospital and home” medical system are important. These are individually treated in the current system. In the future, all needs to be integrated in order to make value with synergy. From selling to experiencing, then solution to creating values.
- To solve the problem of the society, many integrated supports are in need. For instance structuring the system of leading whole community is ideal. Then we need to locate social elements such as medical systems, hospitals and institutions. Making platform with residents’ health basement.

“What is the obstacle?”

- Why social vision cannot be actualized? How do we carry out to be real?
- People think “health” as the individual problem. Rather caring health, they focus on their work and hobbies. Many think sustaining health is “boring.” We need to show people how the individual health affects to their society. This makes people to get motivated with own health care.
- Isolation and addiction are big issues. In those days, everything was done to the individual. But after bubble economy bursted, the society asked individuals to be independent. The individual got isolated from the idea of self-responsibility. In Matsumoto-city, there are 400 community centers, thus the city is highly self-governed.
- People need to be healthy with fun and without patience. Not “doing” the health program, but “creating” it is important. Self-autonomy is only carried on with own will.

“Message to the youths”

- Result of the health is only in the future. Therefore you need to thin now and move on. Do not be afraid of failure, and be creative.
- “Walk around the town with your tablet.” Find yourself with socialized life.

- Now is the time for change in 1000 years. Nobody knows the answers. You can talk to the seniors to get ideas how you live in 120 years.

“Message to Matsumoto-city”

- I want all of you to act as a leader of the health city in the world, with good direction and common platform.
- I want you to make inclusive society without bureaucratic way. I want Matsumoto-city to achieve the best universal city.
- Think as “learning” for everything, is includes health, welfare and education. Learning is not just getting knowledge but for something to do with people. This makes you change with enjoyment. You are the ones to propose and implement the welfare centers and regional development centers.
- People with “second life” can show the model of happy life to the ones in their “first life.” This makes new ideal of family, and spread it from Masumoto-city.

【Keyword】

- “100-year-life”
- Second life
- Self assertiveness and self achievement
- Social diversity is the origin of the innovation
- Common platform
- Behavior changes with changing environment
- Isolation and addiction
- Tide up with self-responsibility
- Trustiness to the society

15:40~15:50 【Hall】

Closing Ceremony

Atsushi Sugiyama, President, World Health Capital Conference Committee;

President, Matsumoto City Medical Association

Hiroyuki Sumiyoshi, (President of Shinshu University)

Vice Chairman, Matsumoto Community Health Industry Promotion Council
